

# TIPS & TRICKS

**Ian Day** reveals how to use cooked hemp in a PVA bag or mesh tube.

## PVA PROOF PARTICLES

Hemp is awesome bait on many waters and is usually spodded out. A different method of feeding hemp, or other damp particles, is to use a PVA stocking or bag. This is especially useful when you only want a small amount of feed in your swim.

The best way to do this is to dry off the hemp with a liberal dusting of dry groundbait. I like to use Hemp & Hali Crush or S-Pellet Groundbait for this as they soak up the moisture from the hemp well and offer extra attraction round the hook bait. Simply add the groundbait to the hemp and mix well giving the hemp a little squeeze to make sure that the majority of the hemp juice is soaked up and it is ready to put in the PVA stocking or bag. You can also add small pellets, sweetcorn or other slightly damp particles to this mix.
